## Double Color Art Shims

For more information, inspiration and ideas and to view a video, please visit [www.roylco.com/product/R15667](http://www.roylco.com/product/R15667).

Sort, pattern, and create beautiful collage art with these colorful, die-cut shapes! Includes squares, circles, triangles, hexagons, ovals, hearts and stars.

Technique: Pop out the die-cut shapes from each sheet and pop out the concentric shapes inside.

Ideas: Glue shapes down to add bright elements to artwork! Create a house, make a perfectly round sun, or collage the shapes together to create people or animals.

Challenge students to practice patterning! Ask students to pattern by shape, color, size or a combination of elements.

Practice stringing and create colorful necklaces! Students can string these shapes on brightly colored yarn to make necklaces for dramatic play.

Incorporate color and shape into math! If students are struggling to understand abstract mathematical concepts, let them use these shapes as counters.

Create birthday, holiday or other special occasion cards! Fold a sheet of paper in half or quarters depending on the size of the card you want. Decorate the front with the collage shapes, and write a message inside!
